SEBO 300 | 350 MECHANICAL

NEW!

The 300 | 350 MECHANICAL series are technically advanced, commercial-grade, upright vacuum cleaners that provide the utmost in reliability and cleaning effectiveness! There are two models, offering a choice between power head widths: the 12-inch SEBO 300 and the 14-inch SEBO 350. To maximize durability to the highest possible level, these vacuums are entirely mechanical and have no electrical components in the handle or bag housing, thereby minimizing electrical connectors. Because all electrical parts are in the power head, simply tap the foot-pedal switch on the power head to start and stop the vacuum. This unique design also gives users externally accessible, tool-free power cord replacement. It also allows simple access to most machine parts, which makes service and maintenance quick and easy.

SEBO 350

Two Power Head Widths with One-sided Edge Cleaning – The SEBO 300 MECHANICAL is 12 inches wide with a cleaning path of 10½ inches, and the 350 model is 14 inches wide with a cleaning path of 12½ inches. Both heads have one-sided edge cleaning.
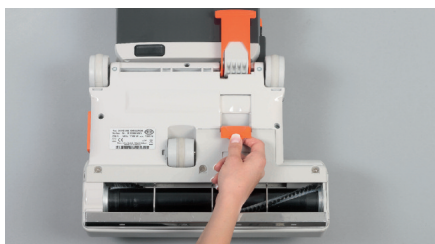

SEBO 300

SEBO 350

Brush Obstruction Indicator with Automatic Shut Off – If an obstruction jams the brush roller, an indicator window notifies the user, the brush roller immediately stops spinning, and the machine shuts off. This feature prevents the belts from breaking and protects the motor and carpet from damage.

Easy Brush-roller Strip Removal and Cleaning – Cleaning hair or debris from the brush strip or replacing it when the bristles are worn is quick and easy, and no tools are required! This feature ensures consistently effective brush agitation of the carpet pile. The sealed brush-roller mechanism with removable brush strip provides extra rugged durability.

Easy External Cord Replacement with Integrated Strain Relief – You can quickly replace a damaged cord without tools or a technician! This saves time and costs. A 39-foot cord also saves time, by reducing the number of electrical outlet changes needed during use.

Easy Maintenance. Protective, Rubber-coated Wheels – The clog removal door and brush-roller strip are easy to access on the power head. The front bottom plate is made of stainless steel and SEBO's rubber-coated wheels protect all floor surfaces and provide smooth maneuverability.

Three On-board, Full-size Tools – The 300 and 350 come standard with a crevice tool, dusting brush and upholstery nozzle. Also, many optional accessories are available.

Excellent Filtration – Both models are equipped with proven, long-lasting filtration that promotes smooth airflow, excellent suction performance, and meets the special demands of users with allergies or asthma. The exhaust filter is also available in the HEPA-class Standard.
